Cyclist Riding

- ➡ [How do annual members and casual riders use Cyclist bikes differently?](#)
- ➡ [The differences between the months of May and April](#)
- ➡ [Conclusion](#)
- ➡ [Appendix](#)

Objective

Identify if there are differences in the days that Cyclist use bikes that contribute in the amount of time the cyclist use them.

Month of April

- Average minutes, ride count and percent difference vary by day of the week for casual and annual members.
- There is little correlation between day of week and ride count.
- Saturday and Sunday are strong indicators of how cyclist use bikes differently.

Cyclist Data in April

Month of May

- The bar chart shows that there are more casual riders biking on Saturday than any given day.
- Annual members use the bikes for less minutes than casual members on any given day.
- Average minutes in April for annual members is 18 minutes and May is 19.25 minutes.
- Average minutes in April for casual members is 39.29 and May is 44.31.

Cyclist Data in May

Conclusion

- 1 Casual members on average use bikes longer than annual members.
- 2 There are more casual members riding bikes on Saturday and Sunday than any given day.
- 3 There are more cyclist using bikes depending on the month.

Thank you
